

# Machine Learning Research Exploration

## PROBLEM & APPROACH

### Research Questions:

- What are recent topics in machine learning research?
- Is there any interesting relationship among these topics?
- Is it possible to find research document based on relevancy instead of simple keywords?

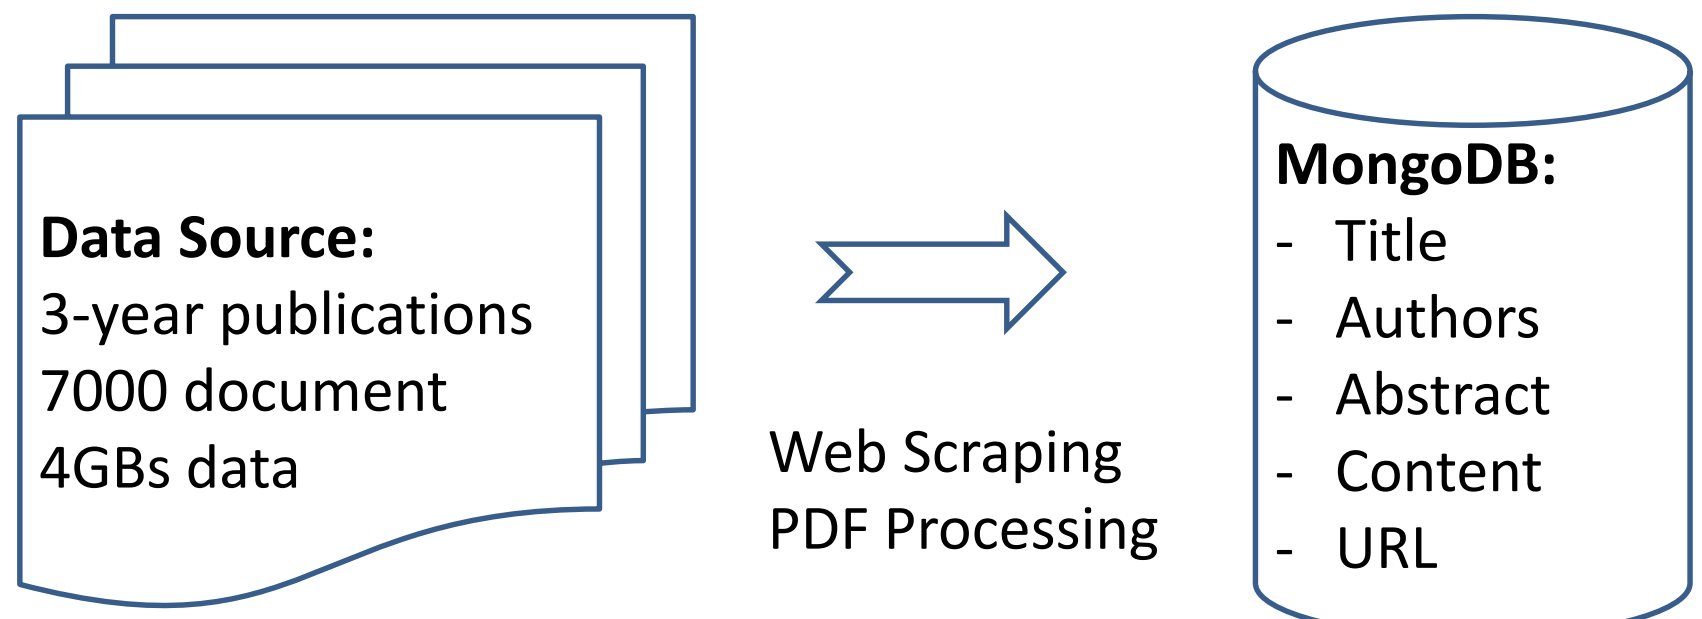

### Approaches:

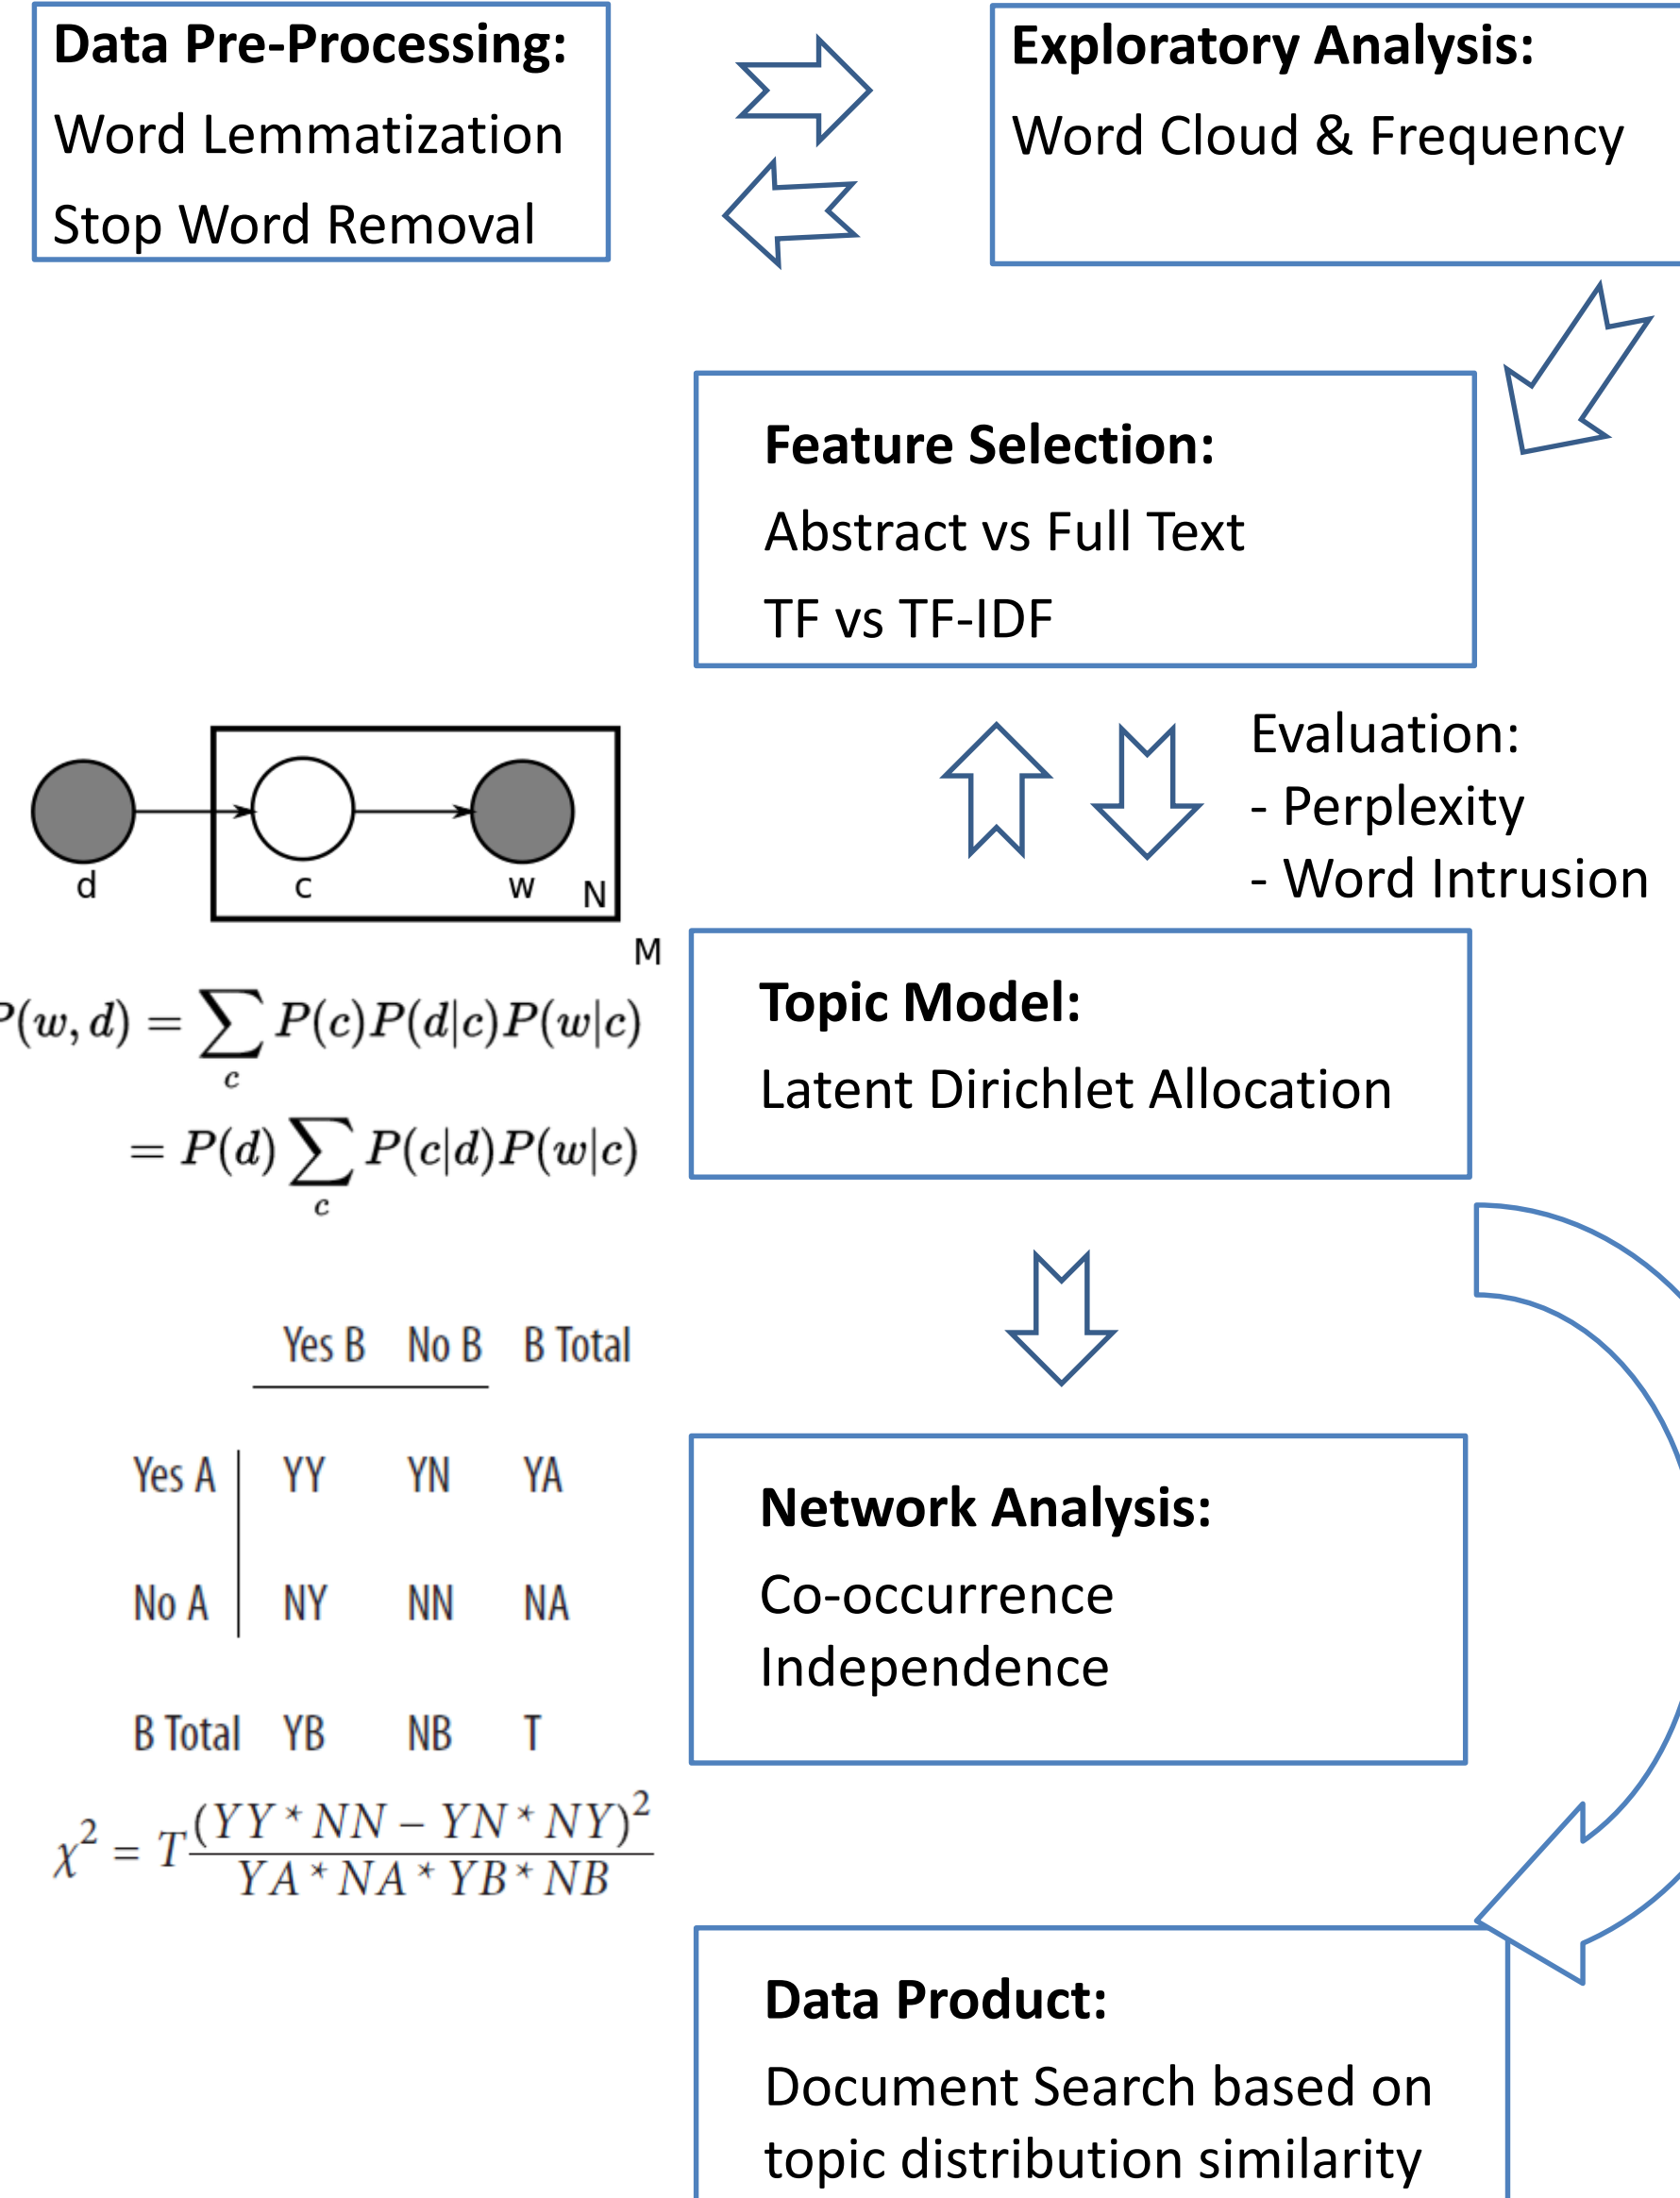

- Analyze machine learning publications from major research journals
- Identify underlying topics of these document using topic modelling
- Identify interesting relationship among topics using network analysis
- Compute relevance score of document based on topic distribution similarity

## DATA COLLECTION:

## DATA ANALYSIS PIPELINE

## DATA EXPLORATION:

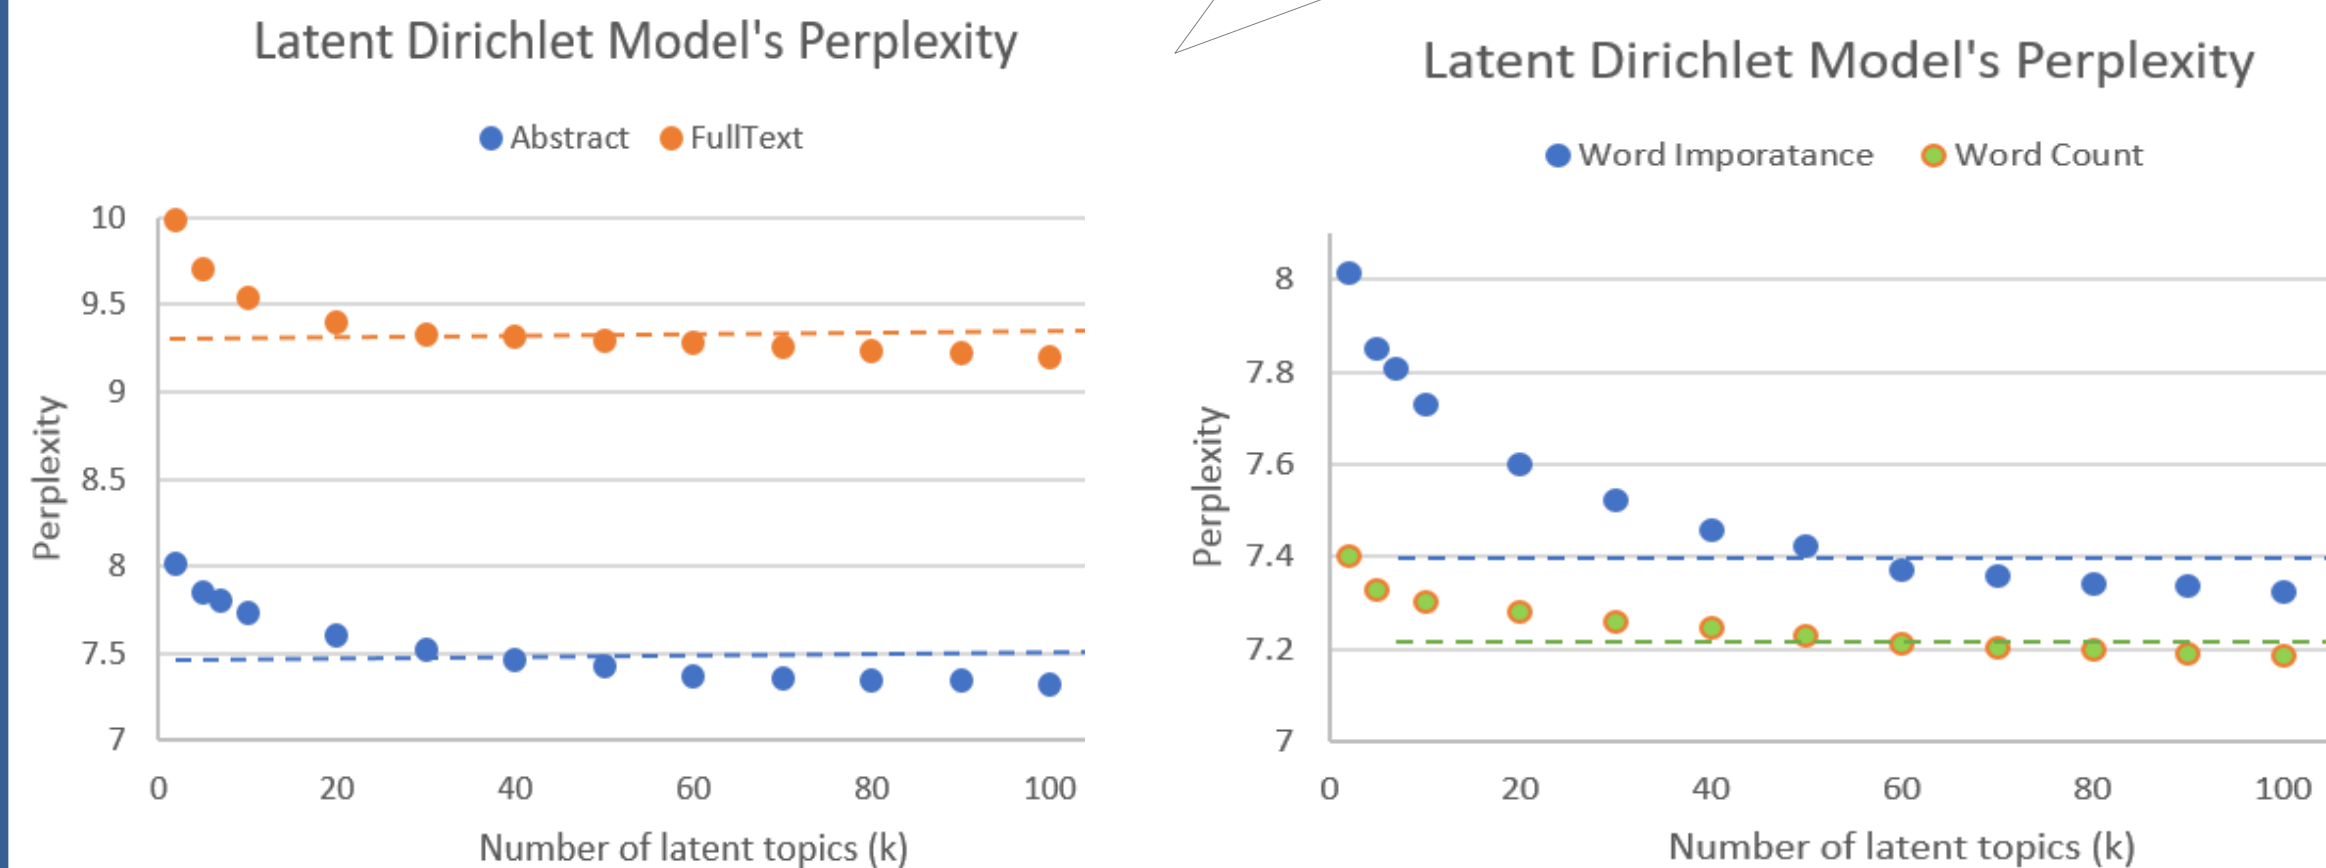

"Full Text" Word Cloud

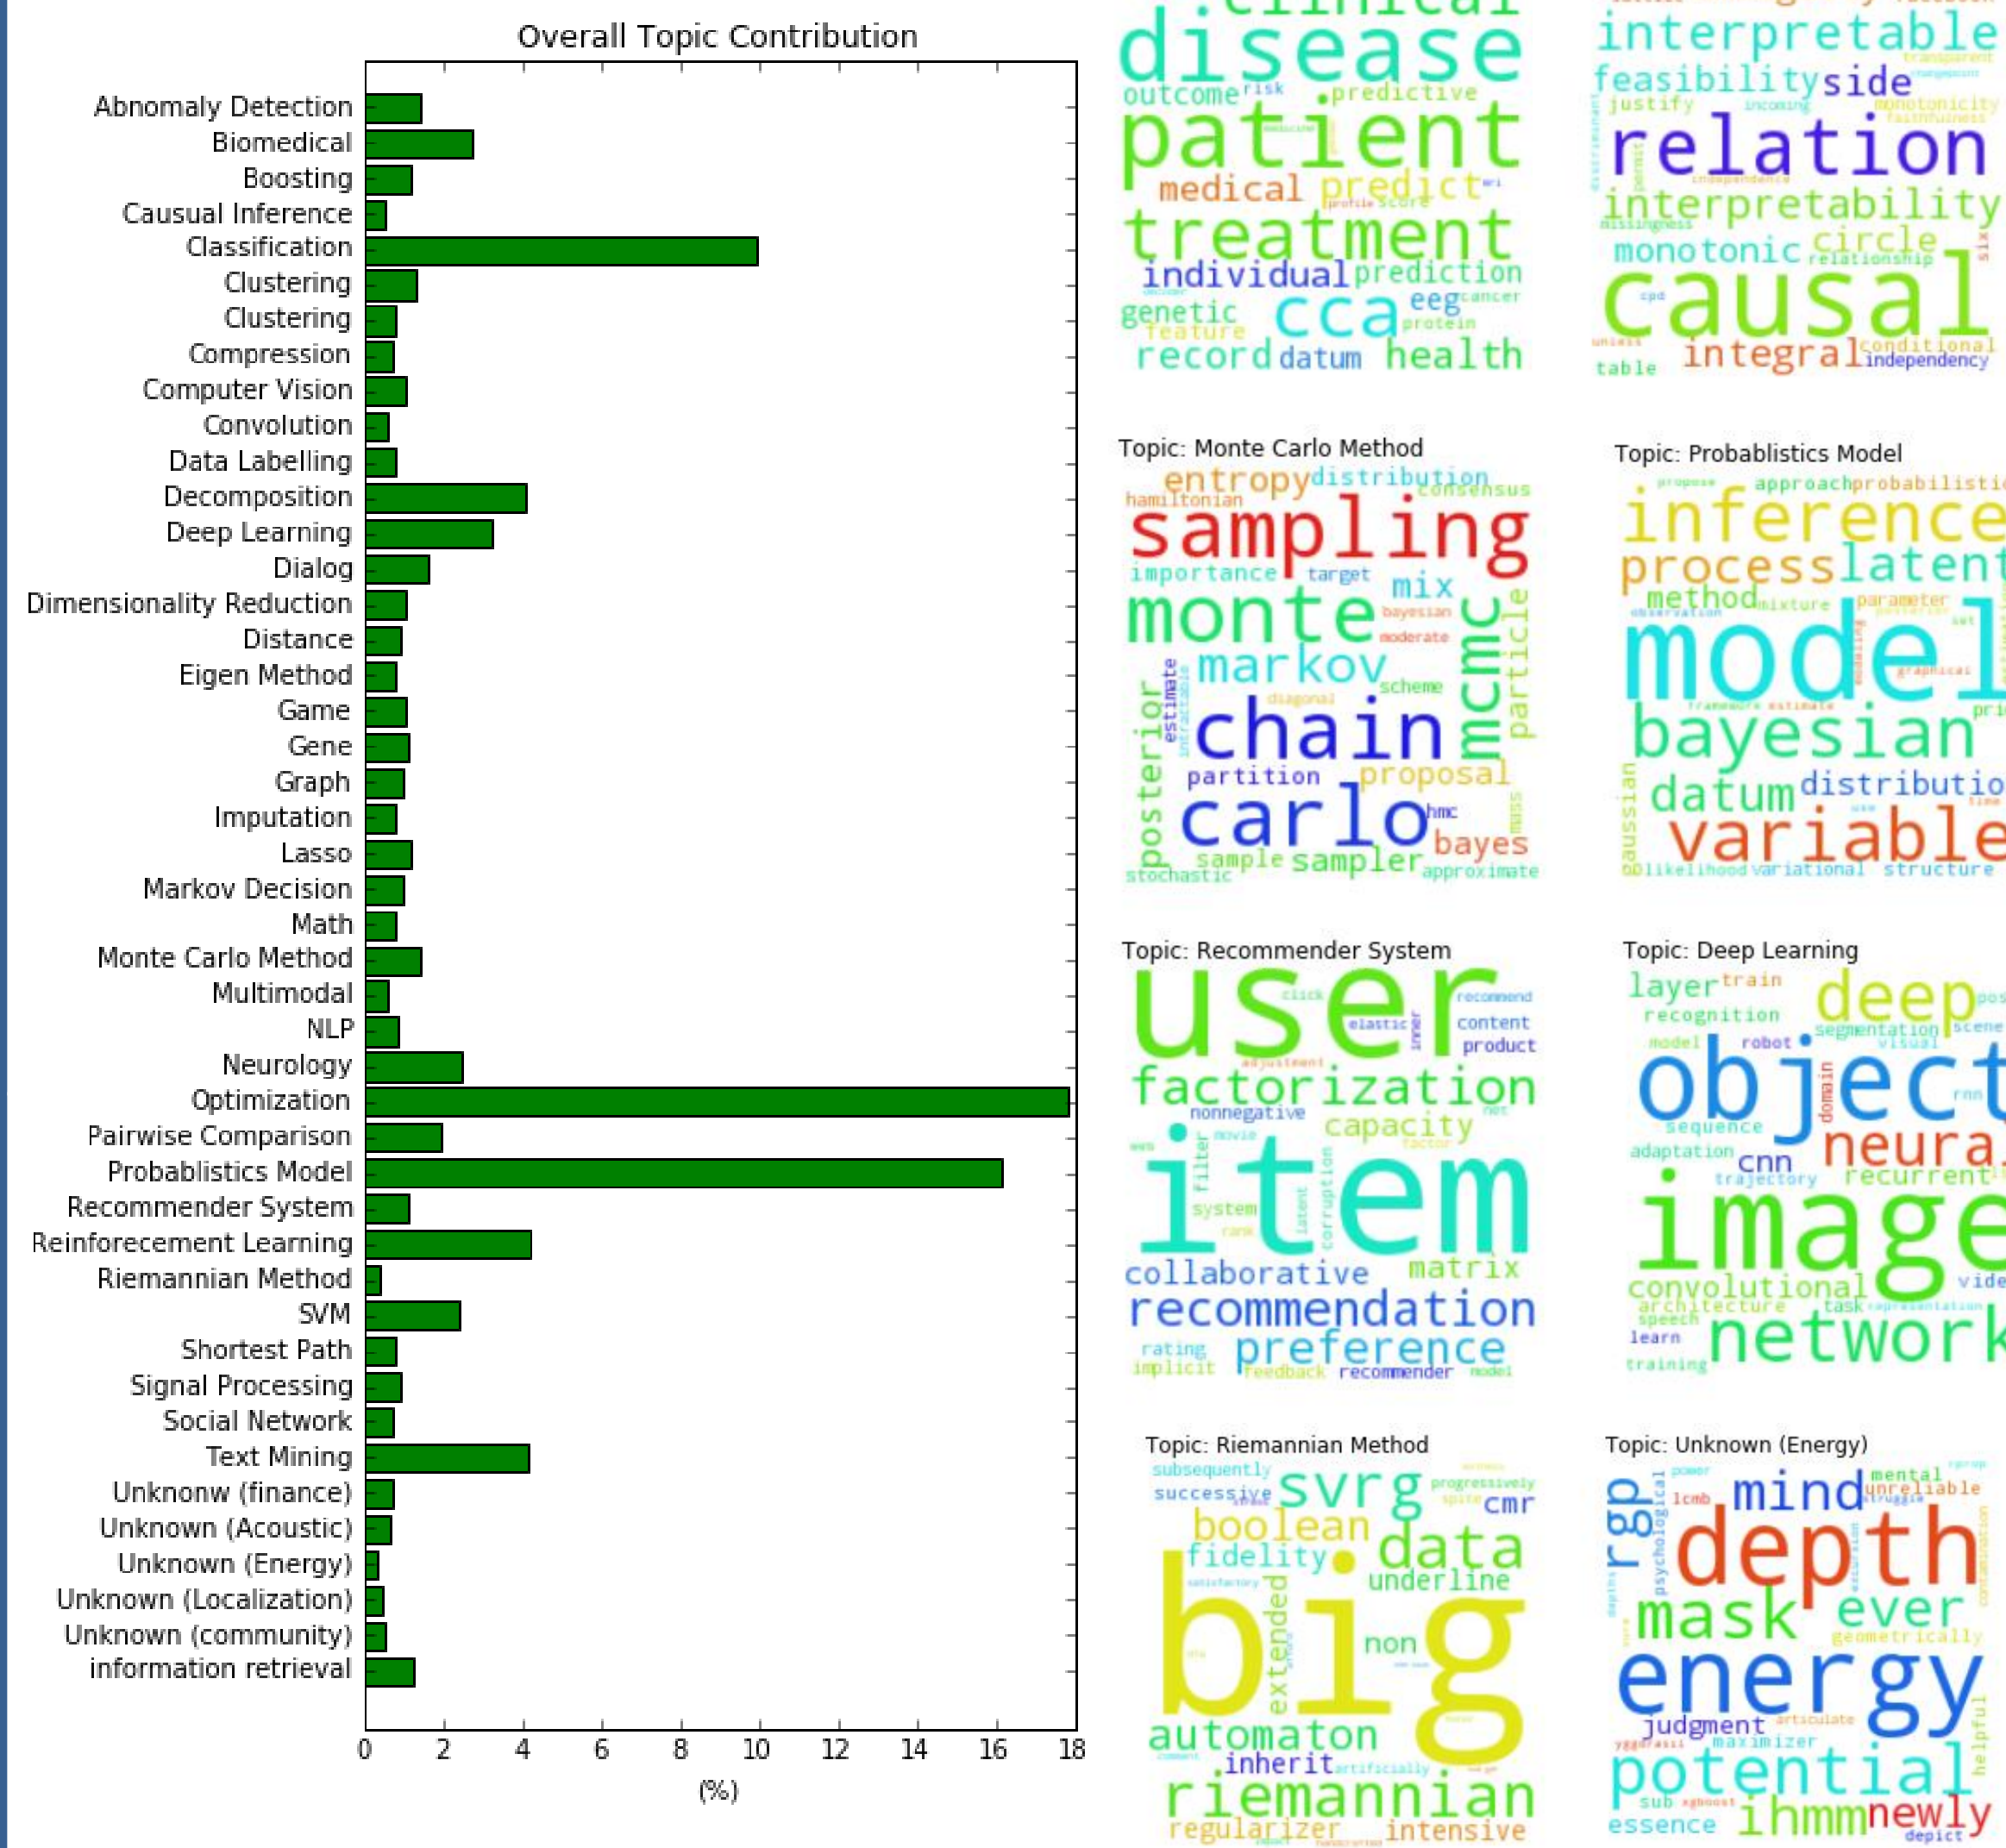

"Abstract" Word Cloud

## TOPIC MODEL

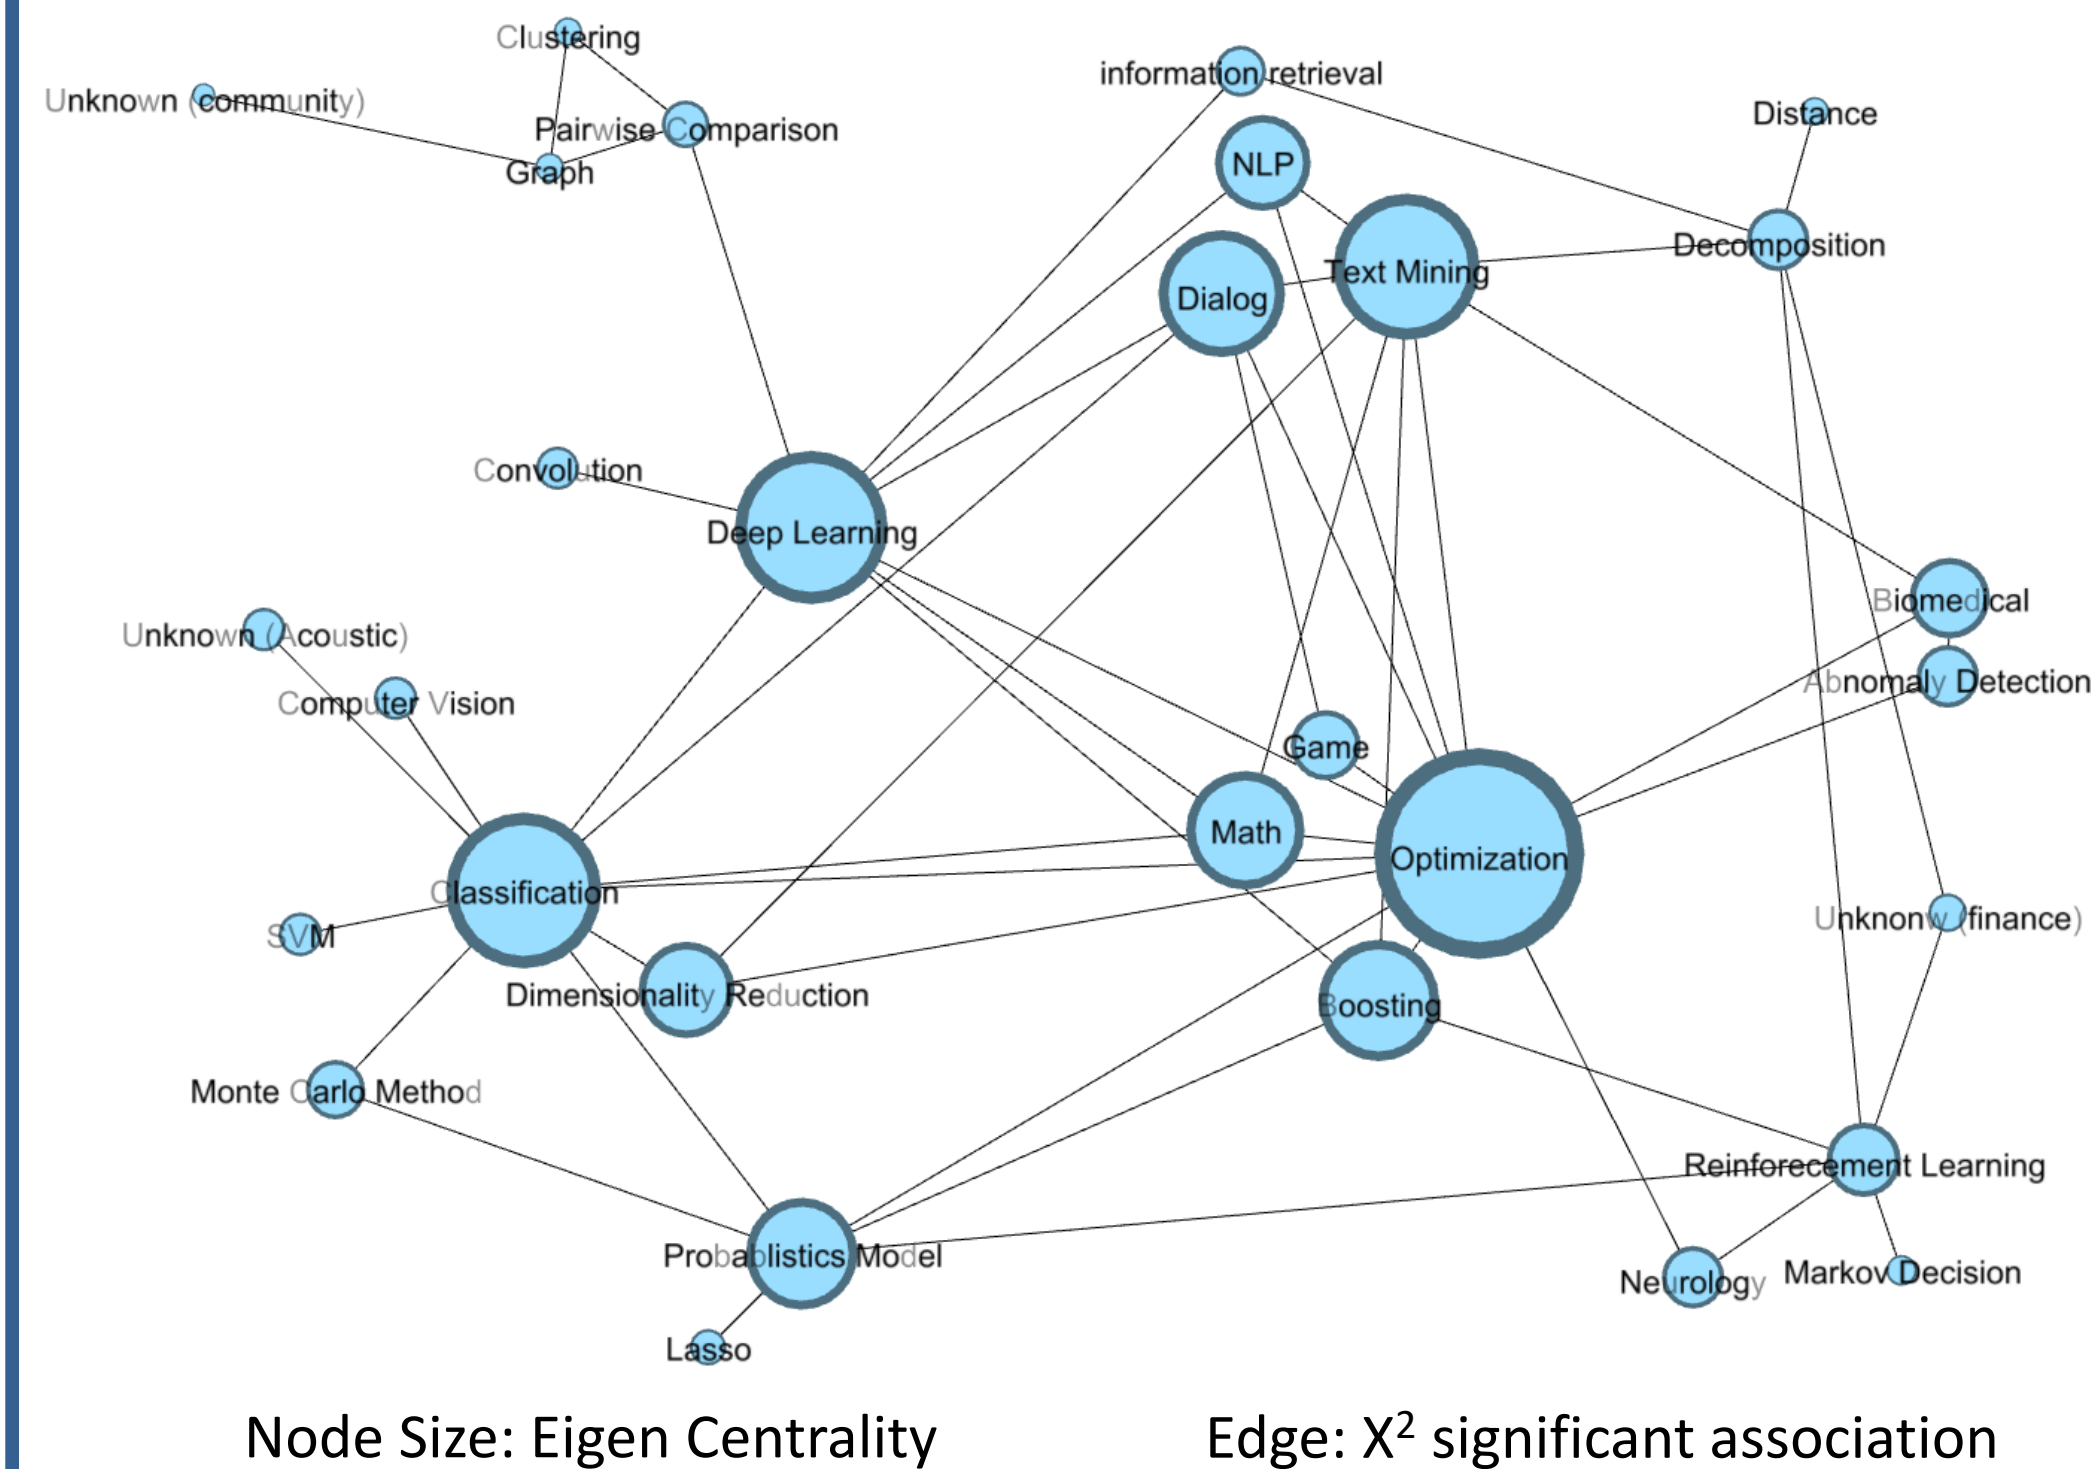

### Model Selection:

### Topics:

## NETWORK ANALYSIS

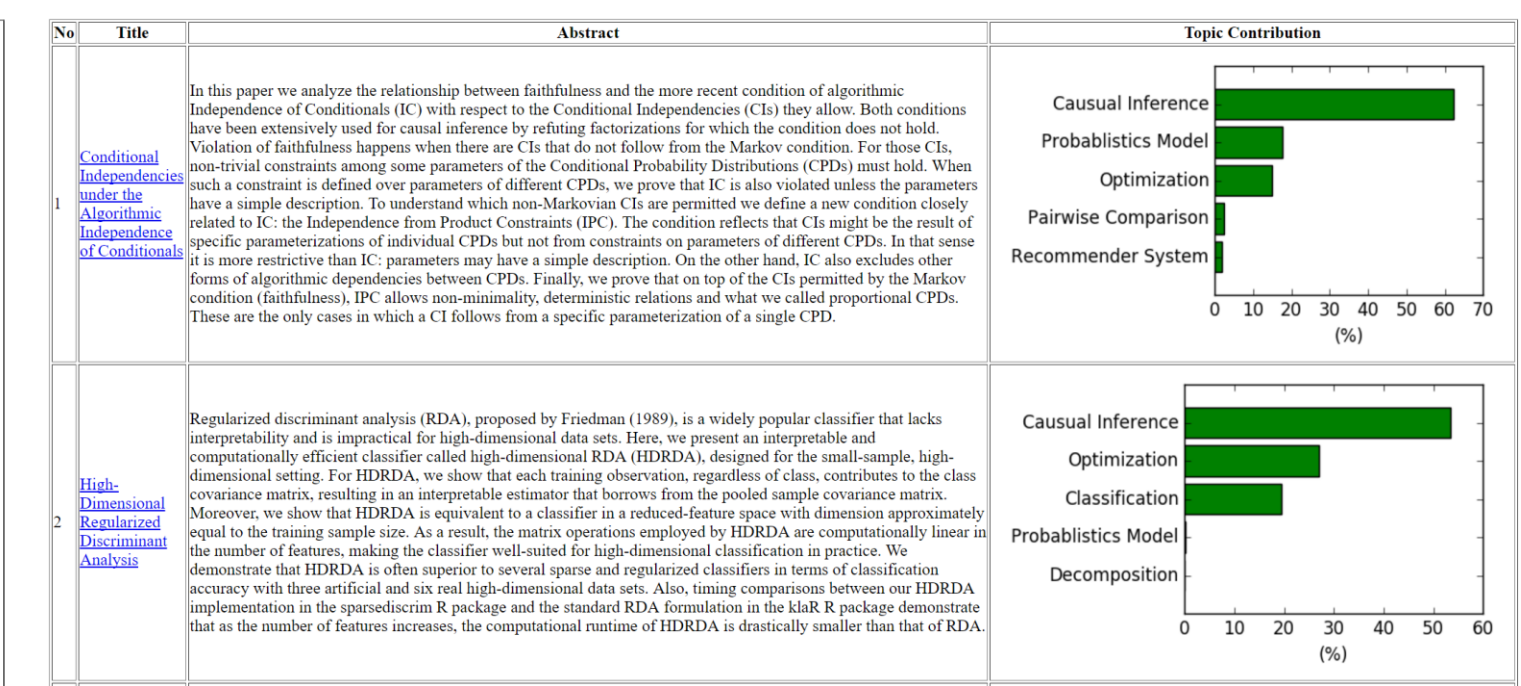

## DATA PRODUCT

### Index Search

No	Topic
1	<a href="#">Anomaly Detection</a>
2	<a href="#">Biomedical</a>
3	<a href="#">Boosting</a>
4	<a href="#">Causal Inference</a>
5	<a href="#">Classification</a>
6	<a href="#">Clustering</a>
7	<a href="#">Compression</a>
8	<a href="#">Computer Vision</a>
9	<a href="#">Convolution</a>
10	<a href="#">Data Labelling</a>
11	<a href="#">Dimensionality Reduction</a>
12	<a href="#">Deep Learning</a>
13	<a href="#">Lasso</a>

### Browse

### Search

### Tag

## SUMMARY

- Major recent topics and relationships might be different from our impression
- The proposed topic distribution similarity-based approach can provide relevant search results and help auto-tagging.

### Learning:

**Methodology:** Data Visualization – Model Interpretation – Project Planning

**Technology:** Scrapy, wordcloud, Gephi, LDA, GraphX, MongoDB, Django
